Troubles

Lost password:
1. Connect server with putty 10.1.1.35:22 manageri *salasana*
2. open mongodb console with typing (mongo)
3. select database (use logsite)
4. type db.account.remove({})
5. type db.config.remove({});
6. type db.config.insert({"allowRegister":true})

Client not working:
1. Try connect 10.1.1.35:3000/admin whit browser.
2. If 1. success then check if client is connected correctly on the internet.
3. If 1. failed then try connect 10.1.1.35:22 with putty or similar program.
4. if 3. success then type "systemctl status kulunvalvonta.service"
5. if 4. gives some kind error try and type "systemctl restart kulunvalvonta.service".
6. if all upper fails try restart client and server machine again. Then on server run "systemctl start kulunvalvonta.service".

Reading logs:
1. Connect server with putty 10.1.1.35:22 manageri *salasana*
2. Type "nano /var/log/syslog"
3. Go last line (quick key ctrl + _ and after that ctrl + v)
